Test Circuit:

Precautions For Use:

1. Over-current-proof

Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen).

- 2. Storage time
 - 2.1 The operation of temperature and R.H. are : 5° C ~ 35° C, R.H. 60° M.
 - 2.2 Once the package is opened, the products should be used within a week. Otherwise, they should be keeping in a dampproof box with desiccants. Considering the tape life, we suggest our customers to use our products within a year(from production date).
 - 2.3 If opened more than one week in an atmosphere $5^{\circ}\text{C} \sim 35^{\circ}\text{C}$, R.H.60%, they should be treated at $60^{\circ}\text{C} \pm 5^{\circ}\text{C}$ for 15hrs.
 - 2.4 When you discover that the desiccant in the package has a pink color (normal = blue), you should treat them in the same conditions as 2.3.

Soldering heat reliability (DIP):

Please refer to the following figure:

Soldering Iron :

Basic spec is ≤ 5 sec when 260°C. If temperature is higher, time should be shorter (+10°C \rightarrow -1sec). Power dissipation of iron should be smaller than 15 W, and temperature should be controllable. Surface temperature of the device should be under 230 °C.

Rework:

- 1. Customer must finish rework within 5 sec under 260°C.
- 2. The head of iron can not touch copper foil.
- 3. Twin-head type is preferred.
